

Disaster Risk Finance (DRF) Analytics 101

A series of knowledge notes demystifying key concepts and tools for policy-makers

This series explores key concepts in **Disaster Risk Financing (DRF) Analytics**, providing insights into risk modeling, financial instruments, and decision-making frameworks used to enhance financial resilience against natural disasters. Each note delves into critical topics such as catastrophe risk modeling, risk data, and tools and approaches for risk layering.

Designed for policymakers and disaster risk management professionals, this series offers a clear and practical understanding of DRF analytics and its real-world applications.

In this series

1. Risk layering explained
2. Catastrophe risk modelling
 - 2a. Flood modelling
 - 2b. Earthquake modelling
 - 2c. Tropical cyclone modelling
 - 2d. Drought risk modelling
3. Risk data and where to find it
4. Windows of action
5. Glossary of key terms
